Public Suggestions and Comments

Members of the public, political parties and other organisations are invited to make suggestions to the Redistribution Committee for the Australian Capital Territory on proposed electoral boundaries for ACT Legislative Assembly elections. Comments are also invited on these public suggestions.

Guidelines for Public Submissions

The Redistribution Committee intends to formally invite public suggestions on **16 February 2000**. This will mean that written suggestions relating to the redistribution of the ACT Legislative Assembly electorates must be lodged with the Redistribution Committee on or before **15 March 2000**.

Suggestions should be lodged with the Redistribution Committee at:

ACT Electoral Commission

Plaza Level, Allara House, 50 Allara St, CANBERRA ACT 2601

Postal Address: PO Box 272, CIVIC SQUARE ACT 2608

Phone: (02) 6205 0033, Fax: (02) 6205 0382

Email: elections@act.gov.au

Copies of all suggestions received by the Committee will be available for public inspection at this office from **16 March 2000**. Written comments relating to any suggestions must be lodged by **29 March 2000**.

It is important to note that these deadlines are set by legislation, and accordingly late submissions will not be accepted.

More Information

The ACT Electoral Commission is making available electoral enrolment information for use by interested persons and organisations. Statistics relating to current enrolment and projected enrolment at the time of the next election are at the end of this booklet, on the enclosed disc and may be downloaded from the Commission's internet site.

Any other information related to the redistribution can be obtained from the ACT Electoral Commission at the above address or from the Commission's website at **www.elections.act.gov.au**

General Information

Why is a Redistribution Taking Place?

The *Electoral Act 1992* provides that a redistribution of electorates for the ACT Legislative Assembly must begin as soon as practicable after the third Saturday in October two years before the next general election is due.

Who is on the Redistribution Committee?

The Redistribution Committee consists of the Electoral Commissioner (Mr Phillip Green), the ACT Planning Authority (Mr Lincoln Hawkins), the Chief Surveyor (Mr Rod Menzies) and the Regional Director, ACT Office, Australian Bureau of Statistics (Ms Dalma Jacobs). The Committee has the task of producing a proposed set of boundaries and names for electorates for the ACT Legislative Assembly and determining the number of members of the Legislative Assembly to be elected from each electorate.

The Redistribution Process

The redistribution is carried out in accordance with the Electoral Act with several opportunities for public participation throughout the process.

Step 1 - Public Suggestions

Before the Redistribution Committee makes its proposal, any interested persons or organisations who wish to make suggestions regarding the redistribution are given 28 days to forward suggestions in writing to the Redistribution Committee. The Committee intends to formally invite public suggestions in the ACT Government *Gazette* on 16 February 2000. Suggestions must be received by 15 March 2000.

Step 2 - Comments on the Public Suggestions

The public suggestions will be made available for public inspection from 16 March 2000 at the office of the ACT Electoral Commission and from the Commission's website. Any comments on the suggestions must be lodged in writing within 14 days. The closing date for comments is 29 March 2000.

Step 3 - The First Proposed Redistribution

The Redistribution Committee considers the public suggestions and comments before making the proposed redistribution. Maps showing the proposed boundaries and names of the electorates will be published in a newspaper and exhibited at the office of the ACT Electoral Commission and on the Commission's website. The Committee expects to publish its proposal in mid April 2000.

Step 4 - Objections to the Proposed Redistribution

Following the publication of the first proposed redistribution there will be 28 days within which initial objections to the proposed redistribution may be lodged by members of the public or organisations.

Step 5 - Objections Considered by the Augmented Electoral Commission

The objections are considered by the augmented Electoral Commission. The augmented Electoral Commission comprises the Chairperson of the ACT Electoral Commission (Mr Graham Glenn) and the other member of the Commission (Dr Christabel Young), sitting together with the members of the Redistribution Committee. The augmented Electoral Commission may hold public hearings into objections.

Step 6 - The Second Proposed Redistribution

After it has considered all the initial objections lodged, the augmented Electoral Commission makes a second proposed redistribution. If this second proposal is not significantly different from the first proposal, the second set of proposed boundaries will become the final boundaries for the ACT.

Step 7 - Further Objections

If the second proposal is significantly different from the proposal made by the Redistribution Committee, the augmented Electoral Commission will invite further objections from members of the public or organisations. Further objections must be lodged within 28 days.

Step 8 - Final Determination

The augmented Electoral Commission will then consider any further objections. The augmented Electoral Commission may again hold public hearings into objections. Following its consideration of all objections, it will make a final determination of boundaries and names of electorates for the ACT.

Legal Requirements for a Redistribution

In making its proposed distribution, the Redistribution Committee is bound by section 36 of the Electoral Act and section 67D of the Commonwealth *Australian Capital Territory (Self-Government) Act 1988*.

The Electoral Act provides that the Territory must be divided into three separate electorates with seven members of the Legislative Assembly to be elected from one electorate and five members of the Legislative Assembly to be elected from each of the other two electorates.

The Self-Government Act sets out the following formula for calculating a quota:

$$\frac{\text{Number of Territory electors} \times \text{Number of electorate members}}{\text{Number of Territory members}}$$

In summary, the Electoral Act and the Self-Government Act provide that the Redistribution Committee and the augmented Electoral Commission shall -

- (a) ensure that the number of electors in an electorate immediately after the redistribution is within the range of not greater than 110%, or less than 90% of the quota;
- (b) endeavour to ensure, as far as practicable, that the number of electors in an electorate at the time of the next general election of members of the Legislative Assembly will not be greater than 105%, or less than 95%, of the expected quota for the electorate at that time; and
- (c) duly consider -
 - (i) the community of interests within each proposed electorate, including economic, social and regional interests;
 - (ii) the means of communication and travel within each proposed electorate;
 - (iii) the physical features and area of each proposed electorate;
 - (iv) the boundaries of existing electorates; and
 - (v) the boundaries of divisions and sections fixed under the *Districts Act 1966*.

Issues and challenges

The need to comply with the above legal considerations presents a number of issues and challenges that will have to be considered by the Redistribution Committee.

On the current boundaries, Ginninderra was 5.66% below the quota in October 1999 and is projected to be 6.97% below the quota in October 2001. Molonglo was 4.09% above the quota in October 1999 and is projected to be 5.63% above the quota in October 2001. Brindabella was 0.06% below the quota in October 1999 and is projected to be 0.91% below the quota in October 2001.

In order to comply with the requirement that each electorate vary by no more than 5% from the quota in October 2001, these statistics indicate that Ginninderra will need to be changed to increase its projected enrolment, while Molonglo will need to be changed to reduce its projected enrolment. No change to the Brindabella boundary appears necessary to satisfy the statistical criteria, however this does not prevent any changes to the Brindabella boundary to better meet other criteria.

Various options are available to the Redistribution Committee to enable the statistical requirements to be met. They include but are not limited to:

- Adding one or more Gungahlin suburbs to Ginninderra;
- Adding one or more North Canberra suburbs to Ginninderra;
- Changing Ginninderra from a 5 member electorate to a 7 member electorate, and changing Molonglo from a 7 member electorate to a 5 member electorate, so that Ginninderra might include, for example, either:
 - all of Belconnen and Gungahlin and parts of North Canberra; or

- all of Belconnen, Gungahlin and Weston Creek.

Any interested persons or organisations who wish to make suggestions or comments regarding the redistribution may wish to take these considerations into account.

Current and Projected Electoral Enrolment Statistics

The following statistics have been compiled for the 2000 redistribution of ACT electoral boundaries in preparation for the 2001 election for the ACT Legislative Assembly. The statistics are shown for ACT suburbs (Statistical Local Areas or SLAs) in alphabetical order (in Table 1), and also according to the existing electoral boundaries for the ACT Assembly (in Tables 2 to 4).

The projections are derived from population projections and from electoral enrolments.

The population projections were calculated using Australian Bureau of Statistics projections relating to Statistical Local Areas (SLAs) as applied at the 1996 Population Census.

The SLA projections also incorporate information gained from forecasts of new occupied dwellings as provided by the ACT Government. This data takes into account the growth of Canberra's population due to expected developments between March 1999 and June 2001.

The enrolment information was supplied by the Australian Electoral Commission and applied to the 1996 SLAs. The enrolment information used in the projections was current as at the close of rolls on 8 October 1999 for the 1999 Federal referendum.

The compilation of these projections was undertaken by the Australian Bureau of Statistics as a consultancy project for the ACT Electoral Commission.

Methodology for the Projections

The general technique employed for the projections was the cohort-component method, widely accepted as the most accurate age/sex population projection method. It involves applying fertility and mortality rates and migration levels to the base population to produce a projected population, which in turn becomes the base for projecting further years.

A three-tiered approach was taken to the process of calculating the projected enrolments.

1. The ACT population was projected by age and sex from June 1998 to June 2002.
2. The population of all ACT SLAs were projected by age and sex and constrained to the total at 1.
3. Actual enrolments as at 8 October 1999 were used to calibrate the SLA population projections, resulting in projected enrolments as at 20 October 2001.

1. Projections of the Total Population of the ACT

The base population for the State cohort-component projections was the ABS 30 June 1998 Estimated Resident Population. The assumptions for fertility and mortality were from *Population Projections 1997 to 2051* (ABS, Cat. No. 3222.0) published on 14 July 1998. The “low” fertility assumption was selected (a total fertility rate declining to 1.60 births per woman in 2005/2006). The migration assumptions are shown below. Note that the 1998/1999 levels were based on many months of known data.

| | Net Overseas Migration | Net Interstate Migration |
|-----------|------------------------|--------------------------|
| 1998/1999 | 0 | -1700 |
| 1999/2000 | 300 | -1000 |
| 2000/2001 | 300 | -500 |
| 2001/2002 | 300 | 0 |

2. Projections of the Populations of the SLAs (Suburbs)

The base population for the SLA cohort-component projections was the 30 June 1998 SLA age/sex Estimated Resident Population. The fertility, mortality and migration assumptions were based on an assessment of SLA-specific levels and trends observed since the early 1990s. At each yearly cycle in this process, the SLA projections were constrained to sum to the total ACT projection, helping to produce more reliable SLA results.

In addition to trend analysis, the SLA net migration assumptions incorporated forecasts of new occupied dwellings as provided by the ACT Government. Final scaling was conducted to ensure the SLA migration summed to the assumed total ACT levels.

The age/sex distribution for the migration assumptions were based on overseas and inter-regional migration rates used in the calculation of published ABS SLA age/sex population estimates, which were originally derived from 1996 Population Census migration data.

The SLA projection results were collapsed into the age group 18 years or more and these were then interpolated to give results as at 8 October 1999 and 20 October 2001.

3. Projected Enrolments in SLAs

SLA projected population 18 years or more as at 8 October 1999 was then compared with electoral roll data of the same date. Any differences were then applied to the 20 October SLA projected population of 18 years or more to give projected enrolments by SLA.

Disclaimer

Any population projections are subject to some degree of uncertainty because it is impossible to exactly predict future trends, particularly the future level of migration. Projection of the population of small areas is especially hazardous. However, care has been taken to produce the best possible projections from the data currently available.

It is important to recognise that the projection results given in this report essentially reflect the assumptions made about future fertility, mortality and migration trends. While the assumptions are formulated on the basis of an objective assessment of demographic trends over the past decade and their likely future dynamics, there can be no certainty that they will be realised.

While ABS takes responsibility for the methodology employed, in accordance with ABS policy regarding small area population projections the assumptions used are the final responsibility of the client, and the projections are not official ABS population statistics.

The projections may be referred to as "...projections prepared by the ABS according to assumptions reflecting prevailing trends agreed to by the ACT Electoral Commission...".

No liability will be accepted by the Australian Bureau of Statistics for any damages arising from decisions or actions based upon this population projection consultancy service.
